## Temperature probe

The FSTSN-P500-010 braided shielded passive temperature probes feature an outstanding stability of temperature characteristics thanks to their platinum sensor element. The shield acts as a Faraday cage to reduce electrical noise and electromagnetic radiation. The sensor element is resin encapsulated in a stainless steel tube. These temperature sensors have a positive temperature coefficient of resistance: when the temperature rises, the resistance rises.

### Key features

- Shield composed of braided strands of tinned copper
- Resin encapsulated sensor element in a stainless steel tube
- Positive temperature coefficient
- Long-term stability
